

Take Control of Infectious Germs, Bacteria & Viruses

According to the US Centers for Disease Control and Prevention nearly **90,000** Americans die each year from hospital acquired infections (HAI). That is more people than those that die from auto accidents and homicides combined. These infections add nearly \$5 billion a year to our country's health care costs. Recent studies show that hospitals can reduce infection rates by up to 70% through proper execution of infection control practices.

With a decrease in antibiotic efficacy, it has become critical to develop infection control procedures to reduce the effects of infectious organisms in the health care setting. The primary cause of these infections is the breach of infection control practices and ill staff members. By making SaniGuard® a key component of your Universal Precaution Procedures you can help protect both your patients and your staff.

Attack Germs Where They Grow

SaniGuard® Dry Sanitizing Surface Spray and Total Release Foggers give you a powerful weapon in fighting the spread of nosocomial infections. EPA registered, SaniGuard® kills 99.99% of germs on contact and dries instantly. SaniGuard® Spray can also be helpful in sanitizing high usage objects, known as germ "hot spots" such as:

- Charts / Electronic Charts
- Stethoscopes
- Door Handles
- Water Fountains
- Toilet Seats
- Telephones and Office Equipment
- Computer Keyboards and Mouse
- Other items that are difficult to sanitize

Even antibiotic resistant strains like VRE (*Vancomycin Resistant Enterococcus*) are no match for SaniGuard®. Testing has shown SaniGuard® to be effective on TB and C. Difficile; while the latest test also confirms that **SaniGuard's® patented formula kills 99.99% of Norovirus (*Norwalk Virus*).**

Flexibility to Tackle Any Environment

SaniGuard® offers our powerful formula in a spray or fogger, which allows you to sanitize any area effectively. The Total Release Fogger allows you to sanitize larger areas such as a patient room, waiting room, restroom, or office in minutes. The Spray is great for sanitizing "hot spots" as needed.

SaniGuard® Foggers come in two sizes; the 8 oz. fogger treats up to 625 sq. ft. in one application and the 3 oz. size treats up to 155 sq. ft. SaniGuard® Spray is available in two convenient sizes, 10 oz. aerosol, and .75 oz. for personal use.

Immediate Action—Unlimited Protection

SaniGuard® has undergone extensive independent laboratory testing and is the only **dry-on-contact** sanitizer available. Unlike competitive products that can have you waiting up to ten minutes to use surfaces after treating, with SaniGuard's® patented formula there is no waiting, no wiping, no mess—and it is safe for use on all surfaces.

To order please contact your local distributor or DEM Technology, LLC. • Phone: (937) 223-1317

SaniGuard® Kills 99.99% of the Germs That Cause:

- MRSA
- VRE
- RSV
- Staph
- Strep
- HIV-1 (AIDS Virus)
- Rubella
- Hepatitis B
- E-Coli
- Herpes Simplex (Types 1 & 2)
- Influenza (Avian, A/Brazil & A/PR)
- Norovirus (Norwalk Virus)
- Chlamydia
- Aspergillus Niger (Mold & Mildew)
- And Many More!
